

Ángel Estarita

Caracas, Venezuela · [LinkedIn](#) / [GitHub](#) · +58-4126052308 · gabrielcardozo3579@gmail.com

Full-Stack Developer focused on the design and maintenance of scalable architectures and the strategic translation of business logic into robust systems. Specialist in the development of modern interfaces and high-performance APIs under **Clean Architecture** and **SOLID** principles, integrating cybersecurity practices under **OWASP standards** and advanced optimization of SQL databases to ensure a smooth and efficient user experience.

PROFESSIONAL EXPERIENCE

SAGA, On-site (May 2025 – Present)

Full-Stack Developer

Description:

- I led the technical support and development of a **SaaS logistics** platform with route optimization and real-time tracking. Implemented advanced geolocation linking mobile applications for drivers and customers.

Key features:

- I optimized the management of spatial data through **PostGIS**, implementing **Dijkstra algorithms and heuristics** for route optimization with integrated visualization via Google Maps API. Integrated **WebSockets** with company-segmented channels to ensure critical data synchronization with low latency.

EPS GROUP, Remote (May 2025 – September 2025)

Full-Stack Developer

Description:

- I developed a high-efficiency **gRPC** service for the secure migration of complex data between **ERP systems**, specializing in medical environments with high relational load.

Key features:

- Designed and implemented interactive dashboards with real-time metrics visualization based on the information transferred via **gRPC**, ensuring a constant flow of data.

Freelance, Remote (Jul 2022 – Present)

Full-Stack Developer

Description:

- I lead the complete life cycle of digital products under the paradigm of **Clean Architecture** and **SOLID** principles, ensuring the development of modern interfaces and highly scalable APIs.

Key features:

- Expert in **the translation of complex business logic** into robust and scalable technical architectures. I lead the design of the complete product cycle through **flowcharts and logical modeling**, defining the behavior of the system and the data structure prior to implementation. I implement security strategies under **OWASP API Top 10 and Threat Modeling** standards, specializing in the **optimization of SQL databases** to align technology with business objectives.

EDUCATION

SANTA MARÍA UNIVERSITY (USM)

Systems Engineering

I studied Systems Engineering, with a focus on software development, databases and advanced algorithms applied to engineering calculations.

ADDITIONAL

- **Database Management and Optimization:** Specialist in logical and physical data modeling (SQL), normalization and optimization of complex queries.
- **System Architecture and Design:** Expert in the design of clean, scalable and resilient architectures. Advanced ability to translate business requirements into flowcharts and logic models.
- **API Engineering and Cybersecurity:** Development of high-performance APIs with a focus on security applying OWASP Top 10 standards, Threat Modeling.
- **Tech stack:** Technical proficiency in **Python, PHP, and JavaScript/TypeScript** ecosystems, with solid experience in frameworks such as **Django, Laravel, Node.js, and React**.
- **Professional Technical English:** Full competence in technical reading and writing for document management, code development under international standards and effective communication in global environments.
- **Leadership and management:** Analytical capacity for complex problem solving, deadline management and technical collaboration in multidisciplinary teams.
